It features an improved export of lists and fixes a few bugs	5.0	Linux, Windows, macOS	LGPL	Improvement: Export of list formatting is now using modern CSS features like counters.     Bugfix: Fix crash in Calc export when last row/column in view is hidden     Improvement: No longer uses deprecated Java constructions     Improvement: Pretty printing of HTML now works better with spreadsheets.     Bugfix: TeXMaths equations are now exported correctly if MathJax is used.     Bugfix: The converter now always uses the current page layout when calculating relative widths. Previously the first page layout in the document was used, which caused miscalculations if page layout changes in the document.	DOWNLOAD
